Task Title:

Creating a Team Members Page for a Company Website using HTML & CSS.

Task Description:

The task involved designing and developing a webpage to showcase the team members of the company. The goal was to create a visually appealing and responsive page that introduces the various roles like leadership, development, and sales/marketing teams, along with their roles and social media links.

Steps Taken:

1. **Planning and Design**:
- Gathered requirements for the team member page, including layout, design, preferences and content structure.
- Designed a wireframe to outline the structure of the page.

2. **HTML Development**:

- Created the basic HTML structure, including sections for the header, team introduction and individual team categories.
- Added placeholder images and text for team members.

3. **CSS Styling**:
- Applied global styles for consistency across the page, including fonts and colors.
- Styled the header and team sections to ensure a cohesive and professional look.
- Used CSS Grid to create a responsive layout for the team member profiles.
- Incorporated hover effects for the team member boxes and social media icons.

4. **Responsive Design**:
- Ensured the page is fully responsive by using media queries to adjust the layout for different screen sizes.

5. **Testing**:
- Tested the page on multiple devices and browsers to ensure compatibility and responsiveness.
- Fixed any layout issues that arose during testing.

Challenges Faced:

1. **Responsive Design**:
- Challenge: Ensuring the grid layout adapted smoothly to different screen sizes.

- Solution: Used CSS Grids "**repeat(auto-fit, minmax(220px, auto))"** to create a flexible grid that adjusts based on the screen width

2. **Consistent Styling**:
- Challenge: Maintaining consistent styling across various sections and elements.
- Solution: Defined global styles and reused CSS classes to ensure consistency.

3. **Image Handling**:
- Challenge: Properly sizing and positioning team member images.
- Solution: Used "**border-radius**" and "**width: 100%**" for images to ensure they fit within their containers and look visually appealing.

Solutions Implemented:

- **CSS Grid :** Utilized CSS Grid for a responsive and adaptable layout.
- **Hover Effects :** Implemented hover effects using CSS transitions to enhance user interaction.
- **Consistent Color Scheme :** Maintained a consistent color scheme (e.g., background color, font color) throughout the page to align with the company's branding.

Learnings:

- **Responsive Web Design :** Gained deeper understanding of CSS Grid and media queries to create responsive layouts.
- **CSS Styling Techniques :** Improved skills in applying consistent styles and implementing CSS transitions.
- **Testing and Debugging :** Learned the importance of testing across multiple devices and browsers to ensure a seamless user experience.

Project Update:

The team member page is fully functional and has been tested for responsiveness and compatibility. The HTML structure and CSS styling have been finalized, and the page is ready for content updates with real team member information. Future enhancements could include integrating animations and additional interactivity.
